## The influence of the test product on the key organisms of the respective body region was examined.

#### Information about the tested product:

#### Manufacturer:

B.Y.M Technologies Ltd. Cms Cmno Llp Cannon Place, 78 Cannon Street EC4N 6AF London United Kingdom

#### Name of the product:

P.Happi<sup>®</sup> Intimate Serum

Product type:	Final product
Application:	Leave-on
Dilution:	No
Sample received:	14 December 2023
Test Start:	14 December 2023
Test End:	02 January 2024
Test Standard:	MyMicrobiome Standard 25.10 Vulvo-Vaginal
Test result:	1.3
Certification:	Granted

 $\textbf{MyMicrobiome AG} \cdot \text{Alte Churerstrasse 45} \cdot \text{FL-9496 Balzers}$

#### **Test description**

The MyMicrobiome Standard evaluates cosmetic and personal care products, that encounter the skin or mucous membrane, in terms of their influence on the microbiome located at a specific body site.

An intact skin microbiome has a fundamental influence on skin health. Products which are to be skin-friendly must also be Microbiome-friendly in order not to unbalance the skin of the user.

The MyMicrobiome Standard evaluates the influence of cosmetic and personal care products on the microbial key players of a specific skin or mucous membrane area. The human microbiome is very individual from person to person.

Each area, however, harbors a characteristic composition of bacteria, viruses and fungi. The test examines the products influence on the key organisms typical for each skin area and thus offers a standardized procedure.

#### Various aspects are examined:

#### The microbial quality of the product.

#### The influence of the product on the natural, healthy skin balance.

The skin-commensal bacterium *Staphylococcus epidermidis* keeps the skin with antimicrobial peptides (so-called bacteriocins) and pH adjustments healthy and keeps skin-harmful germs such as *Staphylococcus aureus* in check. The product should not disturb this balance between skin-friendly and skin-harmful bacteria. This sensitive balance is investigated in conjunction with the product.

#### The influence of the product on the bacterial diversity of the specific body region.

Each body region is colonized by a certain microbial composition. For a healthy skin it is particularly important to maintain this biodiversity. The influence of the product on the respective microbial mixture is examined in the test. The aim is to find as many key organisms as possible after contact with the product.

## The influence of the product on the growth behavior of the microbes of the specific body region.

In addition to the diversity of the specific microbiome, the growth or number of different key organisms should not be influenced by the product. This is investigated in a skin-product contact model. The key organisms are brought into direct and indirect contact with the product and their growth is observed.

page 3 | 8

#### Results

#### The microbial quality of the product.

The prerequisite for the test for microbial friendliness is the microbiological quality of the product. The following table contains the limit values that must be observed.

Types of organismsProducts specially designed for children under 3 years, eye area or mucous skinsOther productsTotal counts mesophilic, aerobic microorganisms (bacteria, yeasts, molds, (TAMC and TYMC))≤ 1 x 10² cfu/g or ml³≤ 1 x 10³ cfu/g or mlbEscherichia coliNot detectable in 1g or 1 mlNot detectable in 1g or 1 mlPseudomonas aeruginosaNot detectable in 1g or 1 mlNot detectable in 1g or 1 ml	Types of organisms	Limit values		
aerobic microorganisms (bacteria, yeasts, molds, (TAMC and TYMC)) $\leq 1 \times 10^2$ cfu/g or mla $\leq 1 \times 10^3$ cfu/g or mlbEscherichia coliNot detectable in 1g or 1 mlNot detectable in 1g or 1 ml		for children under 3 years, eye	Other products	
	aerobic microorganisms (bacteria, yeasts, molds,	≤1 x 10² cfu/g or mlª	≤ 1 x 10 <sup>3</sup> cfu/g or ml <sup>b</sup>	
Pseudomonas aeruginosa Not detectable in 1g or 1 ml Not detectable in 1g or 1 ml	Escherichia coli	Not detectable in 1g or 1 ml	Not detectable in 1g or 1 ml	
	Pseudomonas aeruginosa	Not detectable in 1g or 1 ml	Not detectable in 1g or 1 ml	
Staphylococcus aureusNot detectable in 1g or 1 mlNot detectable in 1g or 1 ml	Staphylococcus aureus	Not detectable in 1g or 1 ml	Not detectable in 1g or 1 ml	
Candida albicansNot detectable in 1g or 1 mlNot detectable in 1g or 1 ml	Candida albicans	Not detectable in 1g or 1 ml	Not detectable in 1g or 1 ml	

a >200 cfu/g or ml, b >2000 cfu/g or ml

#### **Results Microbiological quality**

Determination of TAMC, TYMC, absence of E. coli, P. aeruginosa and S. aureus.

#### The microbiological quality of the product according to DIN EN ISO 17516 is fulfilled.

Parameter	Sample no.: 23.710.25.2
TAMC [cfu/0,1 ml]	< 1,0E+01
TYMC (incl. Candida albicans) [in 0,1 ml]	negative
Escherichia coli [in 0,1 ml]	negative
Pseudomonas aeruginosa [in 0,1 ml]	negative
Staphylococcus aureus [in 0,1 ml]	negative

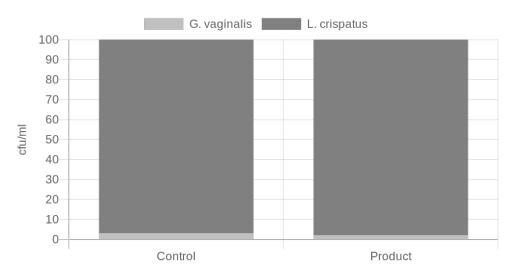

page 4 | 8

#### Results

#### The influence of the product on the natural, healthy skin balance.

A co-culture of *S. epidermidis* and *S. aureus* is incubated with the product. The ratio of the two microbes to each other is determined.

Determination of the bacterial count at time t = 15 min (rinse-off) or 4h (leave-on).

#### G. vaginalis/L. crispatus

#### Results - -

#### The influence of the product on the microbial diversity of the specific body region.

A co-culture of key organisms of the specific body region is incubated with the product for t = 15 min (rinse-off) or 4h (leave-on). The ratio of the microbes compared to the control (PBS) is determined.

# The influence of the product on the growth behavior of the microbes of the specific body region – directly.

The influence of the product on the growth of each individual microbe of the key organisms of the specific body region is investigated and put in relation to the control (PBS). Product contact with the microorganisms is directly.

#### Growth in the presence of the product - direct

Overall rating:			1.2

page 8 | 8

#### Results

The results are evaluated with grades from 1 (one) to 3 (three).

The product has passed up to grade 2.0.

#### Here the grade means:

1.0 – 2.0 = Microbiome-friendly | 2.1 – 3.0 = Microbiome-influencing

Test	Grade
Balance of the skin microbiome	1
Diversity of the corresponding skin microbiome (x2)	1.5
Skin-product contact direct (x2)	1.3
Skin-product contact indirect	1.2
Overall grade	1.3

# With an overall grade of 1.3 the seal "Microbiome-friendly" is awarded according to MyMicrobiome Standard 25.10 Vulvo-Vaginal.
